

CTX-1307BW Citrix Access Gateway 4.5 Standard Edition: Administration

Citrix Access Gateway 4.5 Standard Edition: Administration teaches administrators the skills needed to install and configure Citrix Access Gateway, 4.5 Standard Edition SSL VPN appliances. Citrix Access Gateway Standard Edition is a universal VPN appliance that combines the benefits of IPsec and SSL VPN without any of the shortcomings. This course familiarizes learners with installation, configuration, and administration of the Access Gateway Model 2000 appliance and covers the features of the version 4.5 Standard Edition release.

In the Access Gateway Standard Edition, administrators can easily deploy a Web-downloaded and automatically-updated client allowing end-users to enjoy a rich, desk-like experience. Always-on access seamlessly reconnects users to their applications when they change locations or lose connectivity. Integrated end-point scanning ensures user devices remain safe for connection to the corporate network. Drag-and-drop access policies determine the level of user access, based on administrator-defined rules and end-point analysis to provide secure, controlled, single point-of-access to any information resource.

Audience

This course is intended for administrators who install and configure Citrix Access Gateway and enterprise administrators who build, test, rollout, and administer Citrix Access Suite environments.

Preparatory Recommendations

Training attendees are assumed to be familiar with SSL VPN technology; however, they are not assumed to have prior experience with the Citrix Access Gateway product line.

Key Skills

Upon completion of this course, learners are able to perform the following:

- Define the types and functions of virtual private networks (VPN)
- Define and describe the hardware features and administrative tools of the Citrix Access Gateway Model 2000 Appliance
- Perform an initial installation of an Access Gateway in a new network environment
- Configure network parameters for the Access Gateway
- Configure authentication and user access for the Access Gateway
- Customize the user experience for the Access Gateway

Instructional Method

Self-paced Citrix eLearning

Course Length

Approximately 4.0 hours. The course length is an approximation of how long it takes to complete this course. Learners may spend as much time as they need to complete the course, and are able to log on and off as often as desired.

Certification Preparation

An assessment is administered at the end of this course and is a requirement for the CCA Access Gateway 4 certification.
